

## AMENDMENTS TO THE CLAIMS

---

1. (Currently Amended) A remote control trunk assembly for a saddle type vehicle comprising:

at least one lid:

an opening/closing mechanism for permitting and rejecting the opening and closing of each of said at least one lid, respectively; and

a radio signal receiving unit, said radio signal receiving unit receives a radio signal for remotely operating said opening/closing mechanism, whereby said radio signal receiving unit is disposed on top of said at least one trunk;

wherein said radio receiving trunk assembly is mountable on a rear portion of a vehicle body, said ~~radio receiving trunk assembly~~ lid having a projection formed outside on top of the rear trunk and said radio signal receiving unit is disposed inside said projection on said lid and said projection is disposed at substantially a central portion of the ~~rear trunk~~ the lid.

2. (Original) The trunk according to claim 1, wherein there is a rear trunk and a pair side trunks.

3. (Original) The trunk according to claim 2 further comprising an opening/closing lever for each of said at least one lid, said opening/closing lever provided in a lower portion of said rear trunk.

4. (Cancelled)

5. (Original) The trunk according to claim 4, wherein said radio receiving trunk assembly is mountable on the rear portion of the vehicle body behind a seat, and said projection formed on top of the trunk serves also as a back rest of the seat.

B<sup>1</sup>  
6. (Previously Presented) The trunk according to claim 1, and further comprising:

a switch for detecting the lid is open or closed, said switch outputs a result of the detection to the radio signal receiving unit;

a lock mechanism actuated by a key actuator to lock or unlock the lid; and

a trunk catcher actuated by a pop-up actuator to pop up the lid simultaneously with unlocking the lid.

7. (Original) The trunk according to claim 6, wherein said radio signal receiving unit responds to signals transmitted from the switch to control the pop-up actuator and the key actuator.

8. (Currently Amended) A remote controller for a remote control trunk assembly, the trunk assembly including at least one lid, an opening/closing mechanism for permitting and rejecting the opening and closing of each of the lid, and a radio signal receiving unit which receives a radio signal for remotely operating the opening/closing mechanism, whereby the radio signal receiving unit is disposed on top of at least one trunk, said remote controller comprising:

a locking button for locking the trunk;

an unlocking button for unlocking the trunk; and

a pop-up button for unlocking and popping-up the trunk;

B<sup>1</sup> wherein said radio signal receiving unit is mountable on a rear portion of a vehicle body, said lid having ~~and includes~~ a projection formed outside on top of the ~~trunk~~ lid and the radio signal receiving unit is disposed inside said projection on said lid and at substantially a central portion of the ~~trunk~~ lid.

9. (Previously Presented) The remote controller according to claim 8, and further comprising a radio signal, said radio signal transmitting to the radio signal receiving unit having a switch to control a pop-up actuator and a key actuator.

Claims 10-18. (Cancelled)
